

WordPress plugin: install and use

A free audit inside wp-admin, a weekly re-check and a dashboard widget with your score.

Install

1. Download the plugin zip from [Free downloads](#) (or search "TightBucket Leak Monitor" in **Plugins** → **Add New** once it's listed on WordPress.org).
2. In wp-admin go to **Plugins** → **Add New** → **Upload Plugin**, choose the zip and press **Install Now**.
3. Press **Activate**.

Run your first audit

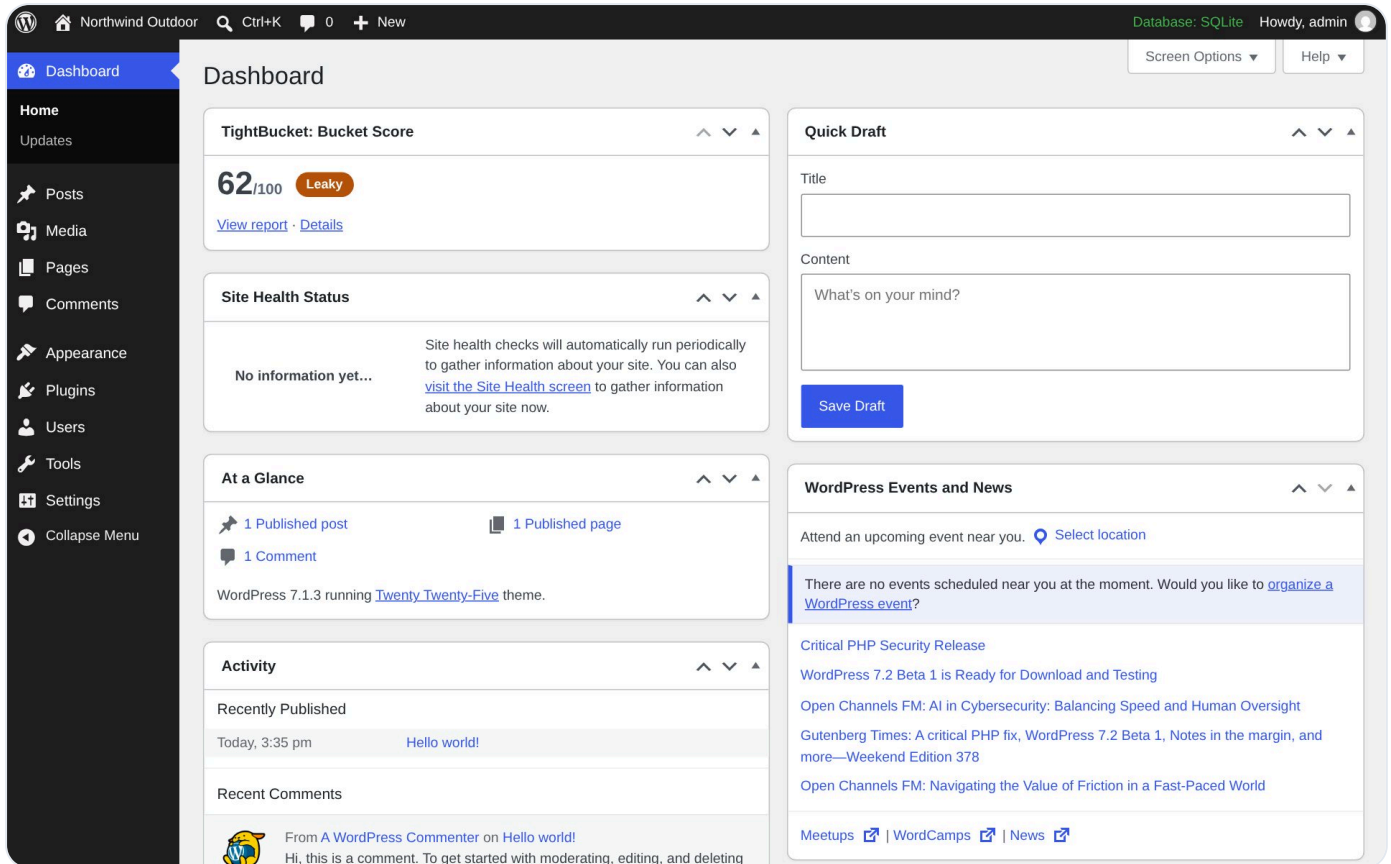

Open **Tools** → **TightBucket**, choose your audit type under **Settings** and press **Run my free audit**. About 20 seconds later you'll see your score and the leaks to plug, in order, with a link to the full report.

The screenshot shows the WordPress dashboard for a site named "Northwind Outdoor". The left sidebar menu is open, highlighting the "Tools" section. Under "Tools", the "TightBucket" option is selected. The main content area displays the "TightBucket Leak Monitor" interface. At the top, it says "Find what is costing this site leads and sales. Every finding shows its evidence and a one-line fix." Below this, a large score of "62/100" is shown with a "Leaky" badge. A text block explains the score: "hydrogen.shop scored 62/100. Biggest leaks: shipping cost/time visible (not found on homepage/product page); product reviews / social proof (none detected); returns / guarantee visible (not found). Fix the first one this week; it's usually the cheapest win." A section titled "Leaks to plug, in order" lists five items: 1. Shipping cost/time visible, 2. Product reviews / social proof, 3. Returns / guarantee visible, 4. Title & meta description, and 5. Social share preview. Each item has a brief description of the issue and a suggested fix. At the bottom of the main content area, there is a "Check again now" button and a "Settings" section with an "Audit type" dropdown menu set to "Store Leak Audit (online store)".

Tools → TightBucket in a real WordPress 7.1 install.

Weekly re-check and dashboard widget

Leave **Weekly re-check** on and WordPress re-runs the audit every week (WP-Cron). The **TightBucket: Bucket Score** widget on your dashboard shows the latest score, so a drop is the first thing you see.

The dashboard widget shows the latest score.

Use your plan (optional)

Paste your API key (Whop dashboard → API) into **API key** for higher limits and report history. Every feature works without one.
